

Alert Management Practice

OBJECTIVE:

The objective of this task was to understand the process of monitoring, analyzing, and prioritizing security alerts using the Wazuh SIEM platform. The task focused on identifying suspicious activities, reviewing generated alerts, understanding alert severity levels, and analyzing MITRE ATT&CK mappings within the Threat Hunting module. This activity also helped in learning how SOC analysts monitor security events, investigate alerts, and document findings as part of daily incident monitoring and triage operations.

WAZUH DASHBOARD

Wazuh SIEM dashboard was successfully configured for monitoring and alert analysis.

Top 10 Alert level evolution

Top 10 MITRE ATT&CKs

The Threat Hunting report displayed alert activity, MITRE ATTACK mappings, and alert severity evolution.

Alerts summary

Rule ID	Description	Level	Count
80730	Auditd: SELinux permission check.	3	15
533	Listened ports status (netstat) changed (new port opened or closed).	7	5
502	Wazuh server started.	3	3
5501	PAM: Login session opened.	3	3
19004	SCA summary: CIS Benchmark for Amazon Linux 2023 Benchmark v1.0.0: Score less than 50% (43)	7	2
19009	CIS Benchmark for Amazon Linux 2023 Benchmark v1.0.0: Ensure sticky bit is set on all world-writable directories.	3	2
5502	PAM: Login session closed.	3	2
19012	CIS Benchmark for Amazon Linux 2023 Benchmark v1.0.0: Ensure sticky bit is set on all world-writable directories: Status changed from passed to 'not applicable'	5	1
5403	First time user executed sudo.	4	1

Alert summaries included authentication events, configuration changes, and system monitoring alerts generated by Wazuh.

Conclusion:

This task successfully demonstrated the use of the Wazuh SIEM platform for security monitoring and alert analysis. Different security events and alerts were reviewed through the Threat Hunting module, providing insight into how SOC analysts detect and investigate suspicious activities in real-world environments. The generated reports and alert summaries helped in understanding alert prioritization, MITRE ATT&CK techniques, and the overall alert triage workflow. This activity improved practical knowledge of SOC operations, event monitoring, and incident analysis procedures.
